

RedBreak 1™

One-Part Red Stain & Colored Beverage Stain Remover

Red Break 1 is a revolutionary breakthrough in stain removal science. Utilizing reducing and polymer technology, **Red Break 1** alters the structure of difficult stains by removing them or making them invisible. **Red Break 1** is a one part system that requires no mixing and no waste of product.

- » Unlike conventional red stain removers, **Red Break 1** is a one part system that requires no mixing. No more mixing solutions and then throwing away your valuable product.
- » **Red Break 1** is designed to remove stains caused by any food or beverage with color added. Stains caused by children's fruit drinks, sports drinks, frozen popsicles, and more can be eliminated.
- » **Red Break 1** often works simply by applying solution directly to the stain. For stubborn stains, the application of heat as an accelerator can enhance the treatment process.

If for any reason you are not thrilled with the performance of Red Break 1 return it to your distributor and we'll get you a product that does.

Directions:

1. This product contains reducing bleaches which can remove color from some fibers, carpets, or fabrics. Always pre-test all cleaning solutions in an inconspicuous area for colorfastness prior to application.
2. Clean the stained area with normal cleaning processes prior to the application of this product. Take an extra dry vacuum pass to remove as much moisture as possible.
3. **Red Break 1** is a one part solution. Liberally apply solution straight to the stained area.
4. Allow 30 seconds to 2 minutes of dwell time. Many stains are removed simply by extracting the area with clear water at this point.
5. If residual discoloration remains, reapply solution liberally straight directly to the stain.
6. Accelerate activity with heat. If using a low pressure, high volume steam generator such as a wallpaper steamer, simply allow steam wand to sit on treated area. Check stain periodically every 30 seconds to 2 minutes. If using a steam iron, cover stained area with a wet white, colorfast cotton towel. Apply steam heat from iron set at the lowest steam temperature. Lift and move the iron every 20-30 seconds and check the area.
7. When the stain has completely disappeared, simply extract the area with clear water. If a slight yellow discoloration remains, simply allow the area to completely dry and the discoloration will usually go away.
8. Use caution when using a product of this type. Color loss or fiber damage caused by excessive heat can be avoided by being diligent in periodically checking the area.
