

# Enhancements to the NEW EVOLUTION WAND

## 1.5", 13" head, 2-jet wand

**Double anodized Black tube** replaces previous powder coating

- **Superior Durability:** Anodizing becomes part of the metal rather than a surface coating, meaning it cannot peel or flake.
- **Extreme Corrosion Resistance:** The electrolytic process creates a dense, protective aluminum oxide layer that is highly resistant to weathering and oxidation.
- **Wear and Scratch Resistance:** The surface hardness is higher than powder coating, offering superior protection against heavy wear and traffic
- **Maintenance & Aesthetics:** Anodized surfaces are easy to maintain and offer a consistent, metallic, high-quality look that does not easily show scratches like paint,

**Upgraded soft-touch valve** - Improved ergonomic feel and performance

- This is the "soft opening" control valve for wands. It makes your wand easier to use with a longer life.
- Cleaning technicians love the reduced stress on their wrists, hands, and fingers. The valve operates smoothly and does not require as much force to squeeze the trigger and is more comfortable to grip. No more numb fingers, carpal tunnel (repetitive motion) syndrome, or similar problems
- Easy to throttle. (doesn't "slam shut" as other valves do)

**Upgraded valve holder bracket**

Tighter fit that will not slide down the tube

**Upgraded ergonomic grab handle**

- More modern design and improved usability

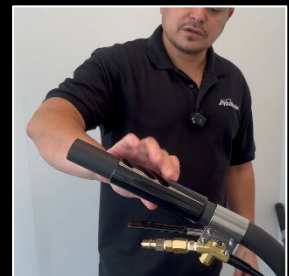

**Serviceable inline filter added**

- Helps prevent jets from clogging, which can reduce or eliminate streaking on carpets and reduce drying times

**Upgraded soft handle grip**

- Better comfort and finish

Part # 000-163-034

**Heat shrink protection** over hose crimps to extend hose life
